Abhishek Sachdeva

AI PRODUCT MANAGER | GENAI, RAG & AI AGENTS

abhisheksachdeva05@gmail.com | +91-9315101199 | LinkedIn | GitHub | Product Portfolio

PROFESSIONAL PROFILE

AI Product Manager with 6+ years across product delivery, business analysis and data products in enterprise operations and financial services. Currently lead product for an enterprise GenAI (RAG) assistant at Deloitte that lifted answer accuracy from 68% to 89% and cut time-to-answer from ~15 to under 3 minutes. Experienced in defining AI product vision, MVP scope and success metrics, evaluating and monitoring LLM output quality, integrating AI into business workflows with human hand-offs and guardrails, and explaining complex AI concepts to business, engineering and data stakeholders.

CORE SKILLS

Product strategy & discovery: Product vision and strategy, problem discovery, stakeholder/user interviews, user journeys, market and user-feedback analysis, MVP definition, roadmap planning, value-based prioritization.

Product execution & delivery: Roadmap execution, backlog prioritization, epics, user stories, acceptance criteria, Agile/Scrum, sprint planning, trade-offs, UAT, release readiness.

AI & product metrics: Answer accuracy, groundedness/citation accuracy, hallucination and refusal rates, precision/recall, latency and cost per query, adoption, baseline vs. outcome analysis; SQL, Power BI, Tableau.

AI agents & GenAI: AI agents & workflow integration (tool calling, intent routing, human-in-the-loop hand-offs, guardrails, retries and fallbacks), LLMs, RAG, semantic search, prompt engineering, AI evaluation (golden sets, benchmarks), model monitoring and feedback loops, responsible AI.

Data & platforms: REST APIs/JSON, API integrations, SQL and data quality, Streamlit, LLM APIs (Groq), AWS exposure.

Tools & methods: Jira, Git, Cursor, n8n, Vercel; Agile/Scrum; MoSCoW, RICE, WSJF; cross-functional communication and requirements traceability.

PROFESSIONAL EXPERIENCE

Consultant (Product Owner / AI Product) | Deloitte Shared Services India | Oct 2025 - Present

- Lead an internal document-aware GenAI (RAG) assistant: defined the product vision, target users, MVP features and success measures, including answer quality, citation accuracy and time to information.
- Own the backlog and capability sequencing; translate needs into epics, user stories and testable acceptance criteria in Jira, and run sprint planning, quality review and UAT with engineering and design.
- Integrated the assistant into employees' document workflow with responsible-AI controls: grounded answers, source citations and explicit unanswered-query handling instead of guessing.
- Monitor and improve model performance through benchmark evaluation, failure analysis and user feedback, which drive retrieval and prompt iterations and release decisions.

Business Analyst (Product Owner) | Wipro HR Services Pvt Ltd | Jul 2019 - Apr 2022

- Partnered with operations and onshore stakeholders to define forecasting and pension-validation problems, business rules, data needs and measurable outcomes.
- Owned the product backlog for two data products: wrote epics, user stories and acceptance criteria; sequenced data validation and core workflows ahead of reporting and usability enhancements.
- Coordinated UAT, stakeholder reviews and cross-functional issue resolution; investigated forecast variances, anomalous estimates and data-quality gaps, and used user feedback to plan iterations.

Specialist | HCL Technologies | Feb 2015 - May 2019

Business Analysis responsibilities (Feb 2017 - May 2019): Used SQL to analyze 100K+ HR and financial records; aligned 15+ KPI definitions and developed Power BI reporting that reduced manual effort by 40%.

Network Engineer (Feb 2015 - Jan 2017): Supported Cisco routing/switching infrastructure, incident triage, technical change documentation and service restoration.

Technical Support Consultant | Techvedic Technologies Pvt Ltd | Feb 2014 - Jan 2015

Resolved software support issues for UK and US users; documented problems, solutions and follow-up actions.

Career Break | May 2022 - Sep 2025

Managed family business operations after a family bereavement; subsequently refreshed product, Agile and analytical skills before returning to employment.

SELECTED PRODUCT PROJECTS

Document-Aware AI Assistant (RAG) | Enterprise knowledge & AI workflows | Deloitte internal initiative

Challenge: Users searched scattered policy and process documents manually, taking around 15 minutes per query.

- Defined target users, MVP scope and success KPIs: response accuracy, citation quality, search time and pilot adoption; prioritized grounded answers with traceable sources.
- Planned the capability sequence (document ingestion, natural-language search, retrieval, citations and unanswered-query handling) and supported UAT against 150 representative questions.
- Ran failure analysis with technical teams to prioritize retrieval, prompt and grounding improvements; re-ran the benchmark each release and fed user feedback into the backlog.

Outcome: Answer accuracy improved from 68% to 89%, unsupported answers fell 60%, and average time to find information dropped from ~15 to under 3 minutes; 120+ pilot users across 3 teams and 90%+ citation accuracy.

Automated Call Volume Forecasting | Data product | Workforce planning

Challenge: Capacity planners relied on manual estimates for staffing, budgeting and service-level planning.

- Gathered user needs, historical-data requirements and seasonality assumptions; established forecast accuracy against actuals as a primary measure.
- Prioritized data-quality checks, time-series forecasts, baseline comparisons and a Power BI planning view; validated outputs through historical and variance checks.
- Investigated unexpected patterns with business and technical teams and used stakeholder feedback to plan iterations.

Outcome: Forecast accuracy improved from ~80% to ~93%; monthly planning effort reduced from 2 days to approximately 4 hours.

Pension Estimates Validation | Exception-management product | Pension operations

Challenge: Operations teams manually checked roughly 5,000 pension estimates per month to spot unusual calculations.

- Mapped review journeys, business rules and data assumptions; defined KPIs for review volume, false positives and turnaround time.
- Prioritized data validation, anomaly flagging, exception review and reporting; coordinated testing with normal and unusual estimates.
- Reviewed false positives with business and technical teams and refined assumptions before stakeholder acceptance.

Outcome: False-positive rate decreased from 30% to 8%; manual review volume fell 65%, saving approximately 25 hours per week.

HR Reporting & Process Improvement | Analytics product | HCL

Challenge: Fragmented spreadsheet reporting created repetitive data consolidation and limited KPI visibility.

- Aligned stakeholder needs and 15+ KPI definitions; queried/validated 100K+ HR and financial records using SQL.
- Built 6 Power BI dashboards, incorporated business feedback and enabled self-service performance review.

Outcome: Reduced manual reporting effort by 40%.

Before You Pause: AI Agent-Style Workflow MVP | Fintech GenAI | NextLeap PM Fellowship capstone

Challenge: First-time SIP investors stop at their first loss because the app shows the number, not what it means; found via an AI discovery engine over 18,489 public posts and 6 user interviews.

- Shipped a live AI workflow at the Pause/Stop moment: intent router (8 intents), live fund-price tool (AMFI data), code-computed numbers and LLM-drafted explanations; advice and forecast questions are blocked before the model.
- Built an evaluation gate of 6 automated checks per answer with retry and safe fallback; chose the solution with RICE and defined North Star, guardrail and AI-quality metrics.

Outcome: Live MVP passed 25/25 hand-labelled golden-set cases; 3 user tests drove fixes. Also built a RAG copilot for RBI KYC compliance (retrieval Hit@1 0.718 to 0.872).

EDUCATION & PROGRAMS

Bachelor of Technology | BRCM College of Engineering and Technology, Bahal
NextLeap Product Management Fellowship | 2026
